

Air and Water Pollution - The Role of Repetition in Science (16-19)

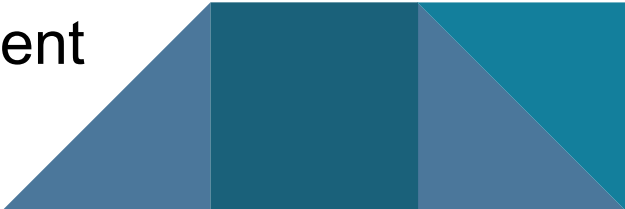

Air and Water Pollution

- Lead(Pb)!
 - soft, malleable, & resists corrosion
 - Impairs CNS function & is toxic [developing brains are sensitive]
 - Industrial revolution sped up Lead extraction
 - 1975: unleaded gasoline
 - major source of contamination in the U.S. today is from plumbing

The Scientific Method

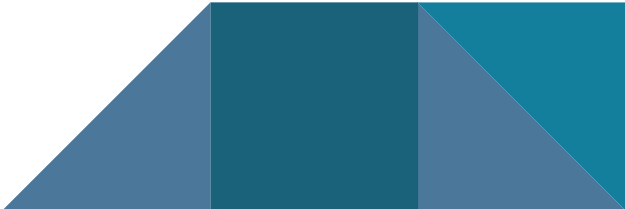

- **Scientific method:** an objective way to learn how new things about everything
 - Observe nature & ask questions
 - Make a general statement about the observation
 - Based on the hypothesis, the observations, and questions, make an informed projection about the hypothesis
 - Test the hypothesis with an experiment
 - Observational
 - manipulation
- 
- A decorative graphic in the bottom right corner consisting of several overlapping blue geometric shapes, including triangles and a rectangle, in various shades of blue.

The Scientific Method

- Accept, revise, or reject the hypothesis
- Report to others
- Replicate the experiment
 - Many people test a hypothesis(finding[not definite])
 - Widely accepted hypothesis(theory[not definite])
 - a theory is widely accepted and universally appears(universal law)

An Illustration of the Scientific Method

- “What will happen to the diversity if the size of a natural area is reduced from ten hectares to one?”
 - A natural area has construction, other areas stay pristine
 - If the one hectare “natural areas” in the housing developments have fewer species, the investigator’s hypothesis was not falsified and report their findings to the scientific community
- 

I thank

you

for
