Review Section II

- Holocene began ~11,700 years ago @ end of last ice age
 - divided into three stages: Early Holocene (11,700 to 8,236 years ago), Middle Holocene (8,236 to 4,250 years ago), & Late Holocene (4,250 years ago-today)
 - We already spread by start of Holocene
 - Humans began forming large agrarian societies ~end of Middle Holocene
- not clear if climate played a role in most large-scale societal events
 - Different case-by-case
- Integrating climate history into human history can be an opportunity for fresh historical perspectives, but sometimes climate just adds to narratives
- Little Ice Age (LIA)[~1300-1850]: a period of cooler global temperatures, on average
- A popular historical narrative describes how humans overcame LIA by building modern states, complicated by current conditions of Anthropocene

Eon	Era	Period	Epoch	Subepoch	Age	
Phanerozoic (pars)	Cenozoic (pars)	Quaternary (pars)	Holocene	Late	Meghalayan	present
				Middle	Northgrippian	4250 a b2k
				Early	Greenlandian	8236 a b2k
						11,700 a b2k
